

MUHAMMED ALİ

Full Stack Developer

Istanbul / Tekirdağ · +90 552 624 45 30 · aliasfur08@gmail.com [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFILE

Computer Engineering graduate and software developer building web applications and RESTful APIs within the .NET ecosystem, using ASP.NET Core MVC/Web API, Entity Framework Core and SQL Server to build layered applications. I apply structures such as JWT, Identity, Repository/Unit of Work and Dependency Injection in real projects. Through 15 months of internship experience, I gained hands-on experience in software development processes while working within Agile/Scrum teams on real projects. Alongside software development, my experience in production and project processes has given me the ability to analyze technical requirements and develop software-based solutions.

TECHNICAL SKILLS

Languages: C#, C++, SQL (T-SQL), JavaScript, TypeScript (basic), HTML, CSS

Framework & .NET: ASP.NET Core MVC, Web API, Identity, Entity Framework Core, LINQ, ADO.NET, Windows Forms

Backend & API: RESTful API, Middleware, JWT, Refresh Token, Role-Based Authorization, Policy-Based Authorization, Swagger/OpenAPI

Software Architecture & Principles: OOP, SOLID, Clean Code, Clean Architecture, N-Tier Architecture, Repository Pattern, Unit of Work, Dependency Injection

Database: Microsoft SQL Server, relational database design, normalization, Stored Procedure, query optimization

Tools & Libraries: Git, GitHub, Visual Studio, SQL Server Management Studio (SSMS), Postman, AutoMapper, FluentValidation, GitHub Actions.

Frontend: HTML, CSS, Bootstrap, JavaScript, React (basic)

Working Method: Agile / Scrum, code review, technical documentation

WORK EXPERIENCE

Project Engineer Intern (Full-Time) | Erkasis Mühendislik *January 2026 – July 2026 · 7 months · Tekirdağ*

- Developed C# and SQL Server based data tracking, management and automation solutions used in industrial project and production processes.
- Made processes more organized and accessible by collecting project data, structuring it in a relational database, and making it reportable.
- Analyzed manually executed workflows to identify processes that could be digitalized and developed software-based solutions.
- Worked in coordination with technical teams to analyze business processes, define requirements, and translate technical needs into actionable software solutions.
- Handled technical data tracking, documentation and reporting for project and production processes.

Full Stack Developer Intern (Full-Time) | DivideSoft A.Ş. *April 2024 – November 2024 · 8 months · Istanbul*

- Developed new features and delivered end-to-end working modules by performing backend and frontend development on ASP.NET Core based web applications.
- Performed updates, improvements and maintenance on backend services, the data access layer and user interfaces by analyzing existing applications.
- Improved application performance by developing and optimizing data models, queries and data access processes using Entity Framework Core and SQL Server.
- Reduced code duplication in the data access layer by approximately 40% by implementing the Repository and Unit of Work design patterns.
- Enabled data flow and implemented new functions for user needs by developing API integrations between backend services and the frontend.
- Analyzed technical issues that arose during development, identified their root causes, and developed lasting solutions.
- Worked within an 8-person Agile/Scrum team on daily stand-ups, code review and Git-based task management.

- Managed stock, inventory, receiving and shipping per the daily plan; tracked material movements.
- Planned shipments per orders, assigned personnel, and coordinated shifts to manage operational workflow.
- Detected stock discrepancies and operational errors through regular inventory checks and carried out the necessary controls and reporting.
- Ensured the accuracy of stock information by recording, checking and tracking products entering and leaving the warehouse.
- Effectively carried out team coordination, task distribution and time management during high-intensity operational periods.

PROJECTS

AdvertisementApp — Full Stack Listing Management System | [GitHub](#)

- Built a full stack web application from scratch with an N-Tier architecture, covering listing creation, editing and administrator approval processes.
- Developed the authorization and layered data access structure using ASP.NET Core Identity, Repository / Unit of Work, AutoMapper and FluentValidation.

Technologies: ASP.NET Core MVC, C#, Entity Framework Core, SQL Server, N-Tier, Repository / Unit of Work, AutoMapper, FluentValidation, Bootstrap, JavaScript

Student API — Secure RESTful Web API | [GitHub](#)

- Designed and developed RESTful API endpoints and CRUD operations for student management.
- Built a secure, standardized API structure with JWT + Refresh Token authentication, role-based authorization and centralized exception middleware.

Technologies: C#, ASP.NET Core Web API, Entity Framework Core, JWT Authentication, Refresh Token, Swagger / OpenAPI

DVLD — Digital Vehicle & Driver Licensing System — Layered Desktop Application | [GitHub](#)

- Developed a Three-Tier desktop application end-to-end covering driver's license application, examination and licensing processes.
- Designed the SQL Server database and developed the data access layer using T-SQL, ADO.NET and Stored Procedures.

Technologies: .NET Framework, Windows Forms, SQL Server, T-SQL, ADO.NET, Three-Tier Architecture, Registry, Event Log

Basic Banking System — Console-Based Banking Application | [GitHub](#)

- Developed a banking application with C++ covering customer and account management, deposits, withdrawals and balance inquiries.
- Implemented file-based data management and user authorization.

Technologies: C++, OOP, File-Based Data Management, Console Application

Frontend / Web Design Work

Responsive interface work built with HTML, CSS and JavaScript: [ProfolioHub](#) · [Kasper](#) · [Leon](#)

EDUCATION

Computer Engineering (Bachelor's Degree) | Namık Kemal University

September 2022 – June 2026 · Tekirdağ

- **Relevant coursework:** Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Software Engineering, Operating Systems.
- **Additional training:** Completed 32 software development courses on ProgrammingAdvices and various learning platforms covering C#, .NET, ASP.NET Core, SQL, Entity Framework Core, ADO.NET, OOP, Data Structures, Algorithms, Web API, MVC and software architecture; applied this knowledge to build web, API and desktop applications.

LANGUAGES

Turkish — Advanced · Arabic — Advanced · English — Technical reading level (improving)
