PROFILE SUMMARY

I'm a Computer Engineering graduate and .NET Developer. Through my internships and personal projects, I've built end-to-end web applications using ASP.NET Core, Entity Framework Core, RESTful APIs, and SQL Server. I've applied Clean Architecture, SOLID principles, and design patterns such as Repository/Unit of Work in practice, and worked within Agile/Scrum teams. With an analytical, problem-solving mindset and a strong drive to keep learning, I'm looking for a software developer role where I can grow my technical skills on real-world projects.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, TypeScript (Basic), HTML, CSS, C++

Backend & Frameworks: ASP.NET Core MVC, ASP.NET Core Web API, ASP.NET Core Identity, Entity Framework Core, LINQ, ADO.NET, Windows Forms, Middleware, React (Basic)

Architecture & Design Patterns: OOP, SOLID, Clean Code, Clean Architecture, N-Tier Architecture, Repository Pattern, Unit of Work, Dependency Injection

API & Security: RESTful API, JWT Authentication, Refresh Token, Role/Policy-Based Authorization, Swagger/OpenAPI

Database & Tools: Microsoft SQL Server, T-SQL, Database Design, Git, GitHub, AutoMapper, FluentValidation, GitHub Actions (Basic)

Frontend: HTML, CSS, JavaScript, Bootstrap

Methodology: Agile (Scrum), Code Review, Technical Documentation

WORK EXPERIENCE

Project Engineer Intern — Erkasis Mühendislik

January 2026 – July 2026 (7 months)

- Supported the development of C# and SQL Server-based software solutions for technical data management and automation needs across industrial project processes.
- Took part in organizing, managing, and analyzing technical data used throughout project processes.
- Contributed to technical data and software processes aimed at making project workflows more organized and traceable.
- Coordinated with technical teams to support data management, analysis, and technical tracking activities.
- Gained hands-on experience approaching industrial processes from a software development perspective, supporting technical needs with software-based solutions.

Full Stack Developer Intern — DivideSoft

April 2024 – November 2024 (8 months)

- Analyzed customer requirements and contributed to the development and improvement of web applications.
- Contributed to the development of different modules by ensuring integration between backend and frontend processes.
- Carried out work on developing database operations, improving existing structures, and increasing application performance.
- Took an active role in analyzing technical problems encountered during development and implementing appropriate solutions.
- Reduced repetitive code by approximately 40% by applying the Repository & Unit of Work pattern.
- Contributed to teamwork, code review, version control, and project tracking as part of an 8-person Agile (Scrum) team.

Warehouse Supervisor — Arslan Yoğurt

01/2023 – 02/2024 (1 Year 1 Month)

- Tracked stock, inventory, product acceptance, material intake/output, and shipment processes in daily warehouse operations.
- Planned shipments according to customer orders and coordinated personnel task distribution and operational processes.
- Performed regular stock counts and inventory checks, contributing to accurate product tracking and the detection of operational errors.
- Carried out product acceptance, storage, and shipment processes in coordination with production planning.
- Took an active role in identifying and resolving discrepancies and shortfalls that arose during operations.
- Managed team coordination, time management, and process tracking responsibilities in a high-volume operating environment.

PROJECTS

AdvertisementApp — Full Stack Listing Management System | [GitHub](#)

A web application built with an N-Tier architecture that lets users create and manage listings. Implemented a membership system with ASP.NET Core Identity and Admin/User role-based authorization. Built to gain hands-on, end-to-end experience with the core functions of a real listing platform and to practice role-based authorization logic.

Technologies: ASP.NET Core MVC, N-Tier Architecture, C#, Entity Framework Core, SQL Server, Repository Pattern, Unit of Work, AutoMapper, FluentValidation, Bootstrap, JavaScript

Student API — Secure RESTful Web API | [GitHub](#)

A student management service built with an N-Tier architecture. Designed secure, scalable API endpoints using JWT Authentication, Refresh Tokens, and role-based authorization. Built to reinforce the secure authentication and authorization flows commonly used in enterprise systems by implementing them from scratch.

Technologies: C#, ASP.NET Core Web API, JWT Authentication, Refresh Token, Swagger/OpenAPI, REST API, Authorization

Digital Vehicle & Driver Licensing System | [GitHub](#)

A layered desktop application built with WinForms that manages vehicle registration and driver's license processes. Optimized database operations with ADO.NET and ensured traceability through Windows Registry and Event Log integration. Built to gain experience with layered architecture and system-level traceability, both commonly required in enterprise desktop applications.

Technologies: .NET Framework (C#), Windows Forms, SQL Server, T-SQL, ADO.NET, Three-Tier Architecture, Windows Registry, Windows Event Log

Basic Banking System | [GitHub](#)

A console-based banking management system built in C++. Implemented customer account management (add, delete, update, search), supported transactions such as deposits, withdrawals, and balance inquiries, and added user management and access control with data stored in text files (Clients.txt, Users.txt). Built to reinforce fundamental data structures and file-based data management logic.

Technologies: C++, File-Based Data Management, Console Application

Web Design Projects

- **Corporate Website Template** — [GitHub](#) | [Live Demo](#)
- **Kasper Web Template** — [GitHub](#) | [Live Demo](#)
- **Portfolio Website Template** — [GitHub](#) | [Live Demo](#)

EDUCATION

Namık Kemal University — Computer Engineering (Bachelor's)

September 2022 – June 2026

Additional Training: 32 software development courses completed through ProgrammingAdvices and various other platforms.

LANGUAGES

Turkish: Advanced | Arabic: Advanced | English: Technical Reading Level (Improving)
